Collection and disposal nationwide

Since February 2nd 1993, WAGO Kontakttechnik GmbH & Co. KG (WAGO) has been a contracting party of Interseroh AG with the **licence number 80064**. Interseroh AG handles collection of "authorised packaging"² within the legal terms and regulations¹ on behalf of WAGO where it accumulates³ within the Federal Republic of Germany and provides for material recycling.

Materials

The packaging materials used are mainly cartons, corrugated cardboard, steel straps, stretch film and PE film. All of them meet the regulations on heavy metal concentrations⁴.

The cartons are made from more than 80 % recycled paper and carry the "Resy" label which ensures trouble-free disposal via a disposal contractor who joins "Resy". The packaging bags are made of PE and marked in accordance with DIN 6120 part 2, also guaranteeing professional disposal.

Stretch film is used for pallet securing since there is no environmental-friendly alternative on the market yet.

We use carton sealing tape made of pure PP and we believe that this is the best solution at the moment. Some of our customers would like paper tapes. However, these cannot be separated entirely from the cartons and therefore cannot be disposed of in an environmentally friendly way.

By taking these measures we contribute actively to protecting the environment.

Return

Taking all environment-relevant factors into account, we would not consider it reasonable for customers to return our packaging materials. However, if you should like to return packaging materials, please bear in mind that we will not bear the incidental transport costs.

¹ § 6 clause 3 packaging regulation (VerpackV) version August 21nd 1998

² Authorised packaging is all packaging in accordance with the "VerpackV" that is circulated by WAGO within the FRG under their label and that exist in places where they occur.

³ Places where packaging accumulates are electrical wholesale companies, the electrical trade as well as especially electronic trade and construction sites.

⁴ Acc. to "VerpackV", packaging or parts thereof may only be circulated if the cumulative concentration of lead, cadmium, mercury and chrome VI does not exceed 100 ppm.

Recycling

At the end of their service life, the individual parts of our products can be recycled without prior treatment, depending both on the new products that are going to be produced and the technical capability of the recycling or disposal procedures.

All information herein is to the best of our knowledge and is state of the art. However, it is not part of our warranty, nor is it an extension of it.

We hope that our statement will help you further. If you should have any questions, we will be pleased to help.

With best regards
 WAGO Kontakttechnik GmbH & Co. KG
