

4-Channel Digital Input Module PROFI-safe V2 iPar

Fig. 753 Series/Delivered without miniature WSB markers

Both 750-661/000-003 and 753-661/000-003 PROFI-safe Input Modules connect potential-free, emergency-off switches with contacts, protection door switches, mode selectors, safety sensors and semiconductor outputs. The modules have 4 clock-sensitive inputs (I1-I4) fed via 2 differently clocked outputs (T1-T2); clock outputs are short-circuit protected. Inputs are continually monitored for cross circuits and voltage supply from separate sources. Additional safety relevant parameters (e.g., operating modes, switching off test pulses, discrepancy or filter times) can be configured via WAGO-I/O-CHECK. The configuration tool can be conveniently integrated into engineering systems supporting both CC2 and CC3 tool calling interfaces (TCI). When exchanging modules, parameters are automatically downloaded into the control unit via PROFI-safe-compatible iPar server – depending on the settings. The PROFI-safe address can be set using the DIP switch located on the side of the module, or via WAGO-I/O-CHECK.

The modules support both PROFI-safe V1 (PROFIBUS) and V2 (PROFIBUS, PROFINET) protocols. An optocoupler provides electrical isolation between the bus and the field side. Individual I/O modules can be arranged in any combination when configuring the fieldbus node.

To protect the module against surge voltages (over-voltage protection acc. to IEC 61000-4-5), the 750-626 filter module or an external surge filter must be used to filter the 24V supply voltage. Reference the product manual for further information (available in German and English).
