1 Notes about this Documentation

Note
Always retain this documentation!
This documentation is part of the product. Therefore, retain the documentation
during the entire service life of the product. Pass on the documentation to any
subsequent user. In addition, ensure that any supplement to this documentation is
included, if necessary.

1.1 Validity of this Documentation

This documentation is only applicable to the I/O module 750-627
(End module for internal data bus extension).

The I/O module 750-627 shall only be installed and operated according to the
instructions in this manual and in the manual for the used fieldbus
coupler/controller.

NOTICE
Consider power layout of the WAGO-I/O-SYSTEM 750!
In addition to these operating instructions, you will also need the manual for the
used fieldbus coupler/controller, which can be downloaded at www.wago.com.
There, you can obtain important information including information on electrical
isolation, system power and supply specifications.

1.2 Copyright

This Manual, including all figures and illustrations, is copyright-protected. Any
further use of this Manual by third parties that violate pertinent copyright
provisions is prohibited. Reproduction, translation, electronic and phototechnical
filing/archiving (e.g., photocopying) as well as any amendments require the
written consent of WAGO Kontakttechnik GmbH & Co. KG, Minden, Germany.
Non-observance will involve the right to assert damage claims.
1.3 Symbols

**DANGER**

Personal Injury!
Indicates a high-risk, imminently hazardous situation which, if not avoided, will result in death or serious injury.

**DANGER**

Personal Injury Caused by Electric Current!
Indicates a high-risk, imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING**

Personal Injury!
Indicates a moderate-risk, potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**

Personal Injury!
Indicates a low-risk, potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

**NOTICE**

Damage to Property!
Indicates a potentially hazardous situation which, if not avoided, may result in damage to property.

**NOTICE**

Damage to Property Caused by Electrostatic Discharge (ESD)!
Indicates a potentially hazardous situation which, if not avoided, may result in damage to property.

**Note**

Important Note!
Indicates a potential malfunction which, if not avoided, however, will not result in damage to property.
Additional Information:
Refers to additional information which is not an integral part of this documentation (e.g., the Internet).

2 Important Notes

This section includes an overall summary of the most important safety requirements and notes that are mentioned in each individual section. To protect your health and prevent damage to devices as well, it is imperative to read and carefully follow the safety guidelines.

2.1 Legal Bases

2.1.1 Subject to Changes

WAGO Kontakttechnik GmbH & Co. KG reserves the right to provide for any alterations or modifications that serve to increase the efficiency of technical progress. WAGO Kontakttechnik GmbH & Co. KG owns all rights arising from the granting of patents or from the legal protection of utility patents. Third-party products are always mentioned without any reference to patent rights. Thus, the existence of such rights cannot be excluded.

2.1.2 Personnel Qualifications

All sequences implemented on WAGO-I/O-SYSTEM 750 devices may only be carried out by electrical specialists with sufficient knowledge in automation. The specialists must be familiar with the current norms and guidelines for the devices and automated environments.

All changes to the coupler or controller should always be carried out by qualified personnel with sufficient skills in PLC programming.

2.1.3 Use of the WAGO-I/O-SYSTEM 750 in Compliance with Underlying Provisions

Fieldbus couplers, fieldbus controllers and I/O modules found in the modular WAGO-I/O-SYSTEM 750 receive digital and analog signals from sensors and transmit them to actuators or higher-level control systems. Using programmable controllers, the signals can also be (pre-) processed.

The devices have been developed for use in an environment that meets the IP20 protection class criteria. Protection against finger injury and solid impurities up to 12.5 mm diameter is assured; protection against water damage is not ensured. Unless otherwise specified, operation of the devices in wet and dusty environments is prohibited.

Operating the WAGO-I/O-SYSTEM 750 devices in home applications without further measures is only permitted if they meet the emission limits (emissions of interference) according to EN 61000-6-3. You will find the relevant information in the section “Device Description” > “Standards and Guidelines” in the manual for the used fieldbus coupler/controller.
Appropriate housing (per 2014/34/EU) is required when operating the WAGO-I/O-SYSTEM 750 in hazardous environments. Please note that a prototype test certificate must be obtained that confirms the correct installation of the system in a housing or switch cabinet.

2.1.4 Technical Condition of Specified Devices

The devices to be supplied ex works are equipped with hardware and software configurations, which meet the individual application requirements. WAGO Kontakttechnik GmbH & Co. KG will be exempted from any liability in case of changes in hardware or software as well as to non-compliant usage of devices.

Please send your request for modified and new hardware or software configurations directly to WAGO Kontakttechnik GmbH & Co. KG.
2.2 Safety Advice (Precautions)

For installing and operating purposes of the relevant device to your system the following safety precautions shall be observed:

**DANGER**

Do not work on devices while energized!
All power sources to the device shall be switched off prior to performing any installation, repair or maintenance work.

**DANGER**

Install the device only in appropriate housings, cabinets or in electrical operation rooms!
The WAGO-I/O-SYSTEM 750 and its components are an open system. As such, install the system and its components exclusively in appropriate housings, cabinets or in electrical operation rooms. Allow access to such equipment and fixtures to authorized, qualified staff only by means of specific keys or tools.

**NOTICE**

Replace defective or damaged devices!
Replace defective or damaged device/module (e.g., in the event of deformed contacts), since the long-term functionality of device/module involved can no longer be ensured.

**NOTICE**

Protect the components against materials having seeping and insulating properties!
The components are not resistant to materials having seeping and insulating properties such as: aerosols, silicones and triglycerides (found in some hand creams). If you cannot exclude that such materials will appear in the component environment, then install the components in an enclosure being resistant to the above-mentioned materials. Clean tools and materials are imperative for handling devices/modules.

**NOTICE**

Clean only with permitted materials!
Clean soiled contacts using oil-free compressed air or with ethyl alcohol and leather cloths.
**NOTICE**

Do not use any contact spray!
Do not use any contact spray. The spray may impair contact area functionality in connection with contamination.

---

**NOTICE**

Do not reverse the polarity of connection lines!
Avoid reverse polarity of data and power supply lines, as this may damage the devices involved.

---

**NOTICE**

Avoid electrostatic discharge!
The devices are equipped with electronic components that may be destroyed by electrostatic discharge when touched. Please observe the safety precautions against electrostatic discharge per DIN EN 61340-5-1/-3. When handling the devices, please ensure that environmental factors (personnel, work space and packaging) are properly grounded.

---

**NOTICE**

Feed system power supply in parallel!
The flow of equalizing currents within the bus electronics can destroy the devices. Therefore, connect the system power supply to all supply points of the fieldbus node in parallel. This prevents potential differences and equalizing currents from forming.

---

**NOTICE**

Perform insulation tests with direct current (DC)!
Both the supply voltage and control voltage side are capacitively coupled to the DIN rail. If the modules are mounted on the DIN rail, application of an AC voltage between the two potentials can lead to the destruction of the device. Use only direct current (DC) for insulation testing. To avoid destroying the device, discharge the device completely before applying the test voltage again.
3 Internal Data Bus Structure with Bus Extension

With an I/O module 750-627 (end module for bus extension) and one or more I/O modules 750-628 (coupler module for bus extension), a fieldbus node can be divided into max. 11 I/O module blocks (hereinafter referred to as "blocks"). The divided fieldbus nodes still act as a logical unit for the fieldbus coupler/controller. All of the functions of the I/O module system are retained without any changes. The first block is terminated with an I/O module 750-627 (end module for bus extension). Each subsequent block is started with an I/O module 750-628 (coupler module for bus extension) instead of a fieldbus coupler/controller and terminated with an I/O module 750-600 (end module).

Note

Number of I/O modules independent of bus extension! The number of total I/O modules permitted in the fieldbus node does not increase by the use of an I/O module for bus extension.

Use an ETHERNET patch cable as a connection cable with the following properties between two blocks:

- Category 5
- Double-insulated shielded twisted pair (STP)
- Cooper
- $4 \times 2 \times 0.25 \text{ mm}^2$

Figure 1: Internal Data Bus Structure with Bus Extension (example)

For the devices as delivered, the cable length between two sub-nodes can be max. 5 meters. Many fieldbus couplers/controllers can be configured, so that the permitted cable length can be increased to max. 10 meters.
This setting can be made using the "WAGO Extension Setting Tool" (759-314), which can be downloaded at [www.wago.com](http://www.wago.com) at no cost.

**Note**

**Note the maximum total cable length of 70 meters!**

The length of all connection cables cannot exceed 70 meters.

The maximum cable length permitted cannot be increased for the following fieldbus couplers/controllers:

<table>

</tbody>
</table>

The above table does not include all versions of the fieldbus couplers/controllers. In contrast to standard items, some specific variants may indeed support a configuration change. Corresponding information is given in the documentation for the specific fieldbus coupler/controller.
4 Device Description

The I/O module 750-627 (end module for bus extension) serves in conjunction with the I/O module 750-628 (coupler module for bus extension) to divide a fieldbus node into multiple stations.

The I/O module 750-627 is plugged into the end of the first block instead of the I/O module 750-600 (end module). This station is completed with this module. A cable with RJ-45 connector establishes the connection to the I/O module 750-628 of the next station. More information on the basic structure of a fieldbus node is available in Section "Internal Data Bus Structure with Bus Extension".

The divided fieldbus node still acts as a logical unit for the fieldbus coupler/controller. All of the functions of the I/O module system are retained without any changes.

The internal system supply powers the module.

4.1 Power Supply

4.1.1 Isolation

Within the fieldbus node, there are three electrically isolated potentials:

- Electrically isolated fieldbus interface via transformer
- Electronics of the fieldbus couplers/controllers and the I/O modules (internal bus)
- All I/O modules have an electrical isolation between the electronics (internal bus, logic) and the field electronics. Some digital and analog input modules have each channel electrically isolated, please see catalog.

4.3.1 Data Contacts/Internal Bus

The internal data bus is used for communication between fieldbus couplers/controllers and I/O modules, as well as the system power supply of the I/O modules. It consists of 6 data contacts that are available as self-cleaning gold contacts.

Correct data transmission via the internal data bus is ensured by the bus termination integrated in the I/O module.

---

**NOTICE**

Do not place the I/O modules on the gold spring contacts!
Do not place the I/O modules on the gold spring contacts in order to avoid soiling or scratching!

---

Ensure that the environment is well grounded!
The devices are equipped with electronic components that may be destroyed by electrostatic discharge. When handling the devices, ensure that the environment (persons, workplace and packing) is well grounded. Avoid touching conductive components, e.g. data contacts.

---

4.3.2 Power Jumper Contacts/Field Supply

The I/O module 750-627 has no power jumper contacts.
4.3.3 **CAGE CLAMP® Connectors**

The I/O module 750-627 has no CAGE CLAMP® connectors.

– dust, caustic vapors or gases  
– ionizing radiation |
4.7 Approvals

Information

More information about approvals.
Detailed references to the approvals are listed in the document “Overview Approvals WAGO-I/O-SYSTEM 750”, which you can find via the internet under: www.wago.com > SERVICES > DOWNLOADS > Additional documentation and information on automation products > WAGO-I/O-SYSTEM 750 > System Description.

The following approvals have been granted to 750-627 I/O modules:

- Conformity Marking
- CUL-US UL508
- Korea Certification MSIP-REM-W43-IDE750

The following Ex approvals have been granted to 750-627 I/O modules:

- DEKRA 11 ATEX 0203 X
- II 3 G Ex nA IIIC T4 Gc

The following ship approvals have been granted to 750-627 I/O modules:

- Federal Maritime and Hydrographic Agency
- BV (Bureau Veritas)
- GL (Germanischer Lloyd) Cat. A, B, C, D (EMC 1)
- RINA (Registro Italiano Navale)
4.8 Standards and Guidelines

750-627 I/O modules meet the following requirements on emission and immunity of interference:

- EMC CE—Emission of interference: EN 61000-6-4
- EMC CE—Immunity to interference: EN 61000-6-2
- ATEX guideline: EN 60079-0 and to EN 60079-15
5 Mounting

5.1 Mounting Sequence

Fieldbus couplers/controllers and I/O modules of the WAGO-I/O-SYSTEM 750/753 are snapped directly on a carrier rail in accordance with the European standard EN 50022 (DIN 35).

The reliable positioning and connection is made using a tongue and groove system. Due to the automatic locking, the individual devices are securely seated on the rail after installation.

Starting with the fieldbus coupler/controller, the I/O modules are mounted adjacent to each other according to the project design. Errors in the design of the node in terms of the potential groups (connection via the power contacts) are recognized, as the I/O modules with power contacts (blade contacts) cannot be linked to I/O modules with fewer power contacts.

**NOTICE**

Insert I/O modules only from the proper direction!

All I/O modules feature grooves for power jumper contacts on the right side. For some I/O modules, the grooves are closed on the top. Therefore, I/O modules featuring a power jumper contact on the left side cannot be snapped from the top. This mechanical coding helps to avoid configuration errors, which may destroy the I/O modules. Therefore, insert I/O modules only from the right and from the top.

**Note**

Don't forget the bus end module!

Always plug a bus end module (750-600) onto the end of the fieldbus node! You must always use a bus end module at all fieldbus nodes with WAGO-I/O-SYSTEM 750 fieldbus couplers/controllers to guarantee proper data transfer.
5.2 Inserting and Removing Devices

**NOTICE**
Perform work on devices only if they are de-energized!
Working on energized devices can damage them. Therefore, turn off the power supply before working on the devices.

5.2.1 Inserting the I/O Module

1. Position the I/O module so that the tongue and groove joints to the fieldbus coupler/controller or to the previous or possibly subsequent I/O module are engaged.

   ![Figure 6: Insert I/O Module (Example)](image)

2. Press the I/O module into the assembly until the I/O module snaps into the carrier rail.

   ![Figure 7: Snap the I/O Module into Place (Example)](image)

With the I/O module snapped in place, the electrical connections for the data contacts and power jumper contacts (if any) to the fieldbus coupler/controller or to the previous or possibly subsequent I/O module are established.
5.2.2 Removing the I/O Module

1. Remove the I/O module from the assembly by pulling the release tab.

Figure 8: Removing the I/O Module (Example)

Electrical connections for data or power jumper contacts are disconnected when removing the I/O module.
6 Connect Devices

6.1 Connecting Cable to RJ-45 Socket

1. Connect the cable for bus extension to the RJ-45-socket (OUT) of the I/O module 750-627.

2. Connect the cable for bus extension to the top RJ-45-socket (IN) of the I/O module 750-628 of the next block.

Both blocks are connected to each other correctly.
7 Use in Hazardous Environments

The WAGO-I/O-SYSTEM 750 (electrical equipment) is designed for use in Zone 2 hazardous areas.

The following sections include both the general identification of components (devices) and the installation regulations to be observed. The individual subsections of the “Installation Regulations” section must be taken into account if the I/O module has the required approval or is subject to the range of application of the ATEX directive.

7.2 Installation Regulations

In the Federal Republic of Germany, various national regulations for the installation in explosive areas must be taken into consideration. The basis for this forms the working reliability regulation, which is the national conversion of the European guideline 99/92/E6. They are complemented by the installation regulation EN 60079-14. The following are excerpts from additional VDE regulations:

Table 14: VDE Installation Regulations in Germany

| DIN VDE 0100 | Installation in power plants with rated voltages up to 1000 V |
| DIN VDE 0101 | Installation in power plants with rated voltages above 1 kV |
| DIN VDE 0800 | Installation and operation in telecommunication plants including information processing equipment |
| DIN VDE 0185 | Lightning protection systems |

The USA and Canada have their own regulations. The following are excerpts from these regulations:

Table 15: Installation Regulations in USA and Canada

| NFPA 70 | National Electrical Code Art. 500 Hazardous Locations |
| ANSI/ISA-RP 12.6-1987 | Recommended Practice |
| C22.1 | Canadian Electrical Code |

**NOTICE**

Notice the following points
When using the WAGO-I/O SYSTEM 750 (electrical operation) with Ex approval, the following points are mandatory:
7.2.1 **Special Conditions for Safe Operation of the ATEX and IEC Ex (acc. DEMKO 08 ATEX 142851X and IECEx PTB 07.0064)**

The fieldbus-independent I/O modules of the WAGO-I/O-SYSTEM 750-.../...-... must be installed in an environment with degree of pollution 2 or better. In the final application, the I/O modules must be mounted in an enclosure with IP 54 degree of protection at a minimum with the following exceptions:

- I/O modules 750-440, 750-609 and 750-611 must be installed in an IP 64 minimum enclosure.
- I/O module 750-540 must be installed in an IP 64 minimum enclosure for 230 V AC applications.
- I/O module 750-440 may be used up to max. 120 V AC.

When used in the presence of combustible dust, all devices and the enclosure shall be fully tested and assessed in compliance with the requirements of IEC 61241-0:2004 and IEC 61241-1:2004.

When used in mining applications the equipment shall be installed in a suitable enclosure according to EN 60079-0:2006 and EN 60079-1:2007.

I/O modules fieldbus plugs or fuses may only be installed, added, removed or replaced when the system and field supply is switched off or the area exhibits no explosive atmosphere.

DIP switches, coding switches and potentiometers that are connected to the I/O module may only be operated if an explosive atmosphere can be ruled out.

I/O module 750-642 may only be used in conjunction with antenna 758-910 with a max. cable length of 2.5 m.

To exceed the rated voltage no more than 40%, the supply connections must have transient protection.

The permissible ambient temperature range is 0 °C to +55 °C.
7.2.2 Special conditions for safe use

(ATEX Certificate TÜV 07 ATEX 554086 X)

1. For use as Gc- or Dc-apparatus (in zone 2 or 22) the field bus independent I/O modules WAGO-I/O-SYSTEM 750-*** shall be erected in an enclosure that fulfills the requirements of the applicable standards (see the marking) EN 60079-0, EN 60079-11, EN 60079-15, EN 61241-0 and EN 61241-1. For use as group I, electrical apparatus M2, the apparatus shall be erected in an enclosure that ensures a sufficient protection according to EN 60079-0 and EN 60079-1 and the degree of protection IP64. The compliance of these requirements and the correct installation into an enclosure or a control cabinet of the devices shall be certified by an ExNB.

2. If the interface circuits are operated without the field bus coupler station type 750-3./.../(DEMKO 08 ATEX 142851 X), measures must be taken outside of the device so that the rating voltage is not being exceeded of more than 40% because of transient disturbances.

3. DIP-switches, binary-switches and potentiometers, connected to the module may only be actuated when explosive atmosphere can be excluded.

4. The connecting and disconnecting of the non-intrinsically safe circuits is only permitted during installation, for maintenance or for repair purposes. The temporal coincidence of explosion hazardous atmosphere and installation, maintenance resp. repair purposes shall be excluded. This is although and in particular valid for the interfaces “CF-Card”, “USB”, “Fieldbus connection”, “Configuration and programming interface”, “antenna socket”, “D-Sub” and the “Ethernet interface“. These interfaces are not energy limited or intrinsically safe circuits. An operating of those circuits is in the behalf of the operator.

5. For the types 750-606, 750-625/000-001, 750-487/003-000, 750-484 and 750-633 the following shall be considered: The interface circuits shall be limited to overvoltage category I/II/III (non mains/mains circuits) as defined in EN 60664-1.

6. For the type 750-601 the following shall be considered: Do not remove or replace the fuse when the apparatus is energized.

7. The ambient temperature range is: 0°C ≤ T_a ≤ +55°C (for extended details please note certificate).
7.2.3 Special conditions for safe use (IEC-Ex Certificate TUN 09.0001 X)

1. For use as Dc- or Gc-apparatus (in zone 2 or 22) the fieldbus independent I/O modules WAGO-I/O-SYSTEM 750-*** shall be erected in an enclosure that fulfils the requirements of the applicable standards (see the marking) IEC 60079-0, IEC 60079-11, IEC 60079-15, IEC 61241-0 and IEC 61241-1. For use as group I, electrical apparatus M2, the apparatus shall be erected in an enclosure that ensures a sufficient protection according to IEC 60079-0 and IEC 60079-1 and the degree of protection IP64. The compliance of these requirements and the correct installation into an enclosure or a control cabinet of the devices shall be certified by an ExCB.

2. Measures have to be taken outside of the device that the rating voltage is not being exceeded of more than 40% because of transient disturbances.

3. DIP-switches, binary-switches and potentiometers, connected to the module may only be actuated when explosive atmosphere can be excluded.

4. The connecting and disconnecting of the non-intrinsically safe circuits is only permitted during installation, for maintenance or for repair purposes. The temporal coincidence of explosion hazardous atmosphere and installation, maintenance resp. repair purposes shall be excluded. This is although and in particular valid for the interfaces “CF-Card”, “USB”, “Fieldbus connection”, “Configuration and programming interface“, “antenna socket”, “D-Sub“ and the “Ethernet interface“. These interfaces are not energy limited or intrinsically safe circuits. An operating of those circuits is in the behalf of the operator.

5. For the types 750-606, 750-625/000-001, 750-487/003-000, 750-484 and 750-633 the following shall be considered: The interface circuits shall be limited to overvoltage category I/II/III (non mains/mains circuits) as defined in IEC 60664-1.

6. For the type 750-601 the following shall be considered: Do not remove or replace the fuse when the apparatus is energized.

7. The ambient temperature range is: $0°C \leq T_a \leq +55°C$ (For extensions please see the certificate).
7.2.4 Special conditions for safe use
(ATEX Certificate DEKRA 11ATEX0203 X)

1. The components shall be installed in a suitable enclosure providing a degree of protection of at least IP54 according to EN 60529, taking into account the environmental conditions under which the equipment will be used.

2. When the temperature under rated conditions exceeds 70 °C at the cable or conduit entry point, or 80 °C at the branching point of the conductors, the temperature specification of the selected cable shall be in compliance with the actual measured temperature values.

3. Provisions shall be made to prevent the rated voltages from being exceeded by transient disturbances of more than 40 %.

4. Components may only be removed or inserted when the system supply and the field supply are switched off, or when the location is known to be non-hazardous.

5. Fieldbus connectors may only be disconnected or connected when the system supply is switched off, or when the location is known to be non-hazardous.

6. The fuses, present in de the system modules 750-6xx may only be replaced when the supply is switched off, or when the location is known to be non-hazardous.

7. Address selectors and ID switches may only be adjusted when the system supply is switched off, or when the location is known to be non-hazardous.

8. The ambient temperature range is: 0°C ≤ $T_a$ ≤ +55°C.
7.2.5 ANSI/ISA 12.12.01

This equipment is suitable for use in Class I, Division 2, Groups A, B, C, D or non-hazardous locations only.

This equipment is to be fitted within tool-secured enclosures only.

---

**WARNING**

Explosion hazard!
Explosion hazard - substitution of components may impair suitability for Class I, Div. 2.

---

**WARNING**

Disconnect device when power is off and only in a non-hazardous area!
Do not disconnect equipment unless power has been switched off or the area is known to be non-hazardous near each operator accessible connector and fuse holder." When a fuse is provided, the following information shall be provided: “A switch suitable for the location where the equipment is installed shall be provided to remove the power from the fuse.”

---

For devices with ETHERNET connectors:
"Only for use in LAN, not for connection to telecommunication circuits”.

---

**WARNING**

Use only with antenna module 758-910!
Use Module 750-642 only with antenna module 758-910.

---

For Couplers/Controllers and Economy bus modules only: “The configuration Interface Service connector is for temporary connection only. Do not connect or disconnect unless the area is known to be nonhazardous. Connection or disconnection in an explosive atmosphere could result in an explosion.

---

**WARNING**

Devices containing fuses must not be fitted into circuits subject to over loads!
Devices containing fuses must not be fitted into circuits subject to over loads, e.g. motor circuits!
WARNING
For devices equipped with SD card slots: Insert or remove the SD cards unless the area known to be free of ignitable concentrations of flammable gases or vapors!
Do not connect or disconnect SD-Card while circuit is live unless the area is known to be free of ignitable concentrations of flammable gases or vapors.

Information
Additional Information
Proof of certification is available on request.
Also take note of the information given on the operating and assembly instructions.
The manual, containing these special conditions for safe use, must be readily available to the user.
